INFECTIOUS DISEASES

Accelerating Global AMR Research Program

OVERVIEW

A European biotech organization sought a long-term partner to support its ambitious infectious disease R&D and clinical documentation needs.

Their mission was clear: deliver high-quality medical and scientific documents to accelerate drug development for AMR research.

CHALLENGE

They faced a significant challenge: managing a broad range of complex medical writing deliverables across global programs without overburdening the internal teams.

Previous collaborations had resulted in high writer turnover and inconsistent expertise in AMR. They needed a partner who could provide continuity, deep therapeutic knowledge, and operational efficiency for a multi-year program culminating in regulatory approval.

HIGHLIGHTS

- Supported NDA-ready submissions.
- Delivered consistent quality with the same two lead writers.
- Contributed to the successful approval , acknowledged in a Lancet publication.
- Built a partnership rooted in passion for infectious diseases, creating a “rapid response team” .

SOLUTION

We assigned a dedicated pod of passionate writers specializing in infectious diseases, ensuring familiarity and efficiency. The client’s satisfaction with the initial project led to work spanning 15 projects over three years.

From clinical trial protocols and CSRs to manuscripts and regulatory appendices, every document adhered to rigorous QC processes and timelines. By planning projects in advance, the client was able to work with the same writer continuously, allowing us to streamline workflows while maintaining full transparency and consistency throughout.

Feel confident in your clinical and regulatory documents
